Subject: RE: TPHS Fields - Shotput Field Mix

Good Afternoon,

Unfortunately, the regular baseball infield mix and the shot put/discus mix are a different type of material. Different type of application for a different outcome.

Shot put discus fields need to be able to be stabilized to a point that the shot-put ball and discus make marks/dents in the field but also can be raked over/cleaned up to be reused for future meets.

The product we quoted is an approved "or equal" product that is cheaper than the specified material. Unfortunately, though it still does come from California. A large amount of the cost in it is the trucking. This is the only other option that will still allow the fields to meet regulations.

Please let us know if you have any other questions.

Thank you,

Chelsea Layne
Estimator/Project Manager

Subject: TPHS Fields - Shotput Field Mix

Good Morning Kelly,

I wanted to ask for your thoughts on replacing the spec'd shotput field mix with baseball infield mix – do you see this as a potential savings?

I was surprised at the cost, especially compared to recent unit rates we've been seeing for baseball infield mix, and was hoping this might be a VE opportunity – it seems like there's a precedent for this in a shotput/discus application, but figured you would probably be able to confirm and let us know what the cost difference would be.

Please let me know what you think, and provide pricing if there's merit – hoping to be able to incorporate as a VE option to the Owner and would need to have the value by EOD today/first thing tomorrow if possible.

Thank you!

Chris Laux
