Team,

Please see the attached minutes from our meeting.

Please provide the following information by 5/22/2026:

- Provide pricing for a new 3" post columns for the existing canopy **ADD \$7,832.00**

Provide cost for added joist supports for FCU, ducts, and piping. **Ronda, We have no additional loads added to the joists nothing was called out in addition to the 366TL/251LL on plan. It looks like the plans call out a 43.7 PSF SL and no dead load shown but it looks like 17.3 PSF DL was used for joist loading. The EOR would need to let us know what is covered in the DL design and if the loads for FCU, ducts and piping are covered in that loading or provide what additional load to add for.**

- Rhonda to reach out to Barts' for weight clarifications.
- Provide pricing for vent and 8"(and wider) opening bracing
 - 5 total openings **ADD \$2,237.00**
- Provide remob cost for the scoreboard coordination and for the canopy at the existing school. **ADD \$8,784.00**

If you have any questions, please let us know.

Thank you,

Jairo Gomez
Project Engineer

To Whom it May Concern,

Advanced Welding & Steel wanted to reach out directly with an important and time-sensitive update regarding the U.S. wide flange beam market.

Since the beginning of the year, wide flange beam pricing across the country has increased by more than 25%, driven by continued mill price increases, rising logistics and fuel costs, and tightening supply throughout both domestic and foreign markets.

Several key factors are accelerating this shift:

- **Mill Price Increases:** Multiple rounds of increases have already been implemented, with mills holding firm due to strong order backlogs
- **Logistics & Freight:** Elevated fuel and transportation costs continue to materially impact delivered pricing
- **Supply Constraints:** High demand—particularly from data center and infrastructure projects—is limiting availability and extending lead times

As a result, we are currently seeing little to no availability across many beam sizes, with lead times continuing to stretch—especially on larger sections, many of which are now pushed out to end of year or longer.

In addition, many future mill rolling schedules are now listed as “Inquire” or have already closed, while upward pressure on pricing continues with no immediate relief in sight.

For these reasons, we strongly recommend reviewing upcoming project requirements now. Securing material early will be critical in protecting both pricing and schedule, and taking delivery sooner rather than later may help lock in availability before further increases occur.

Advanced Welding & Steel is actively positioning both domestic and foreign inventory to help minimize disruption through these market conditions. Our goal is to stay ahead of these shifts so we can continue delivering reliable service, material availability, and competitive solutions when they matter most.

If you would like to review upcoming needs, discuss current availability, or secure future material, please reach out to our team directly. We appreciate your continued partnership and look forward to supporting your upcoming projects.
